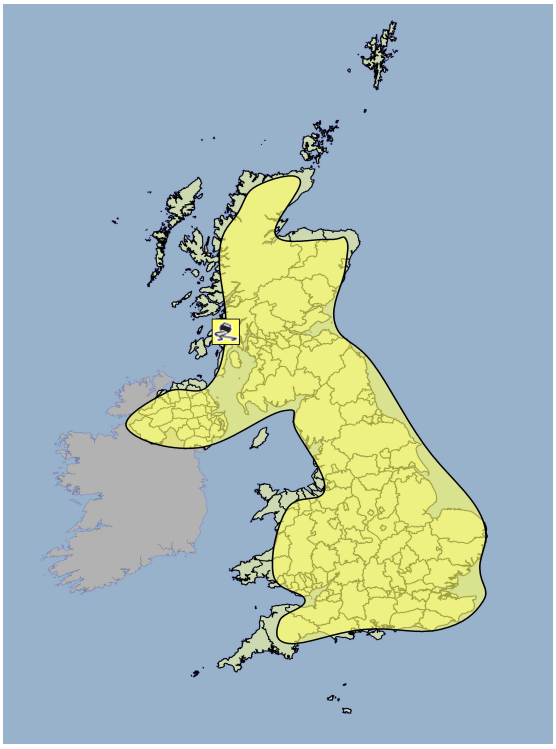
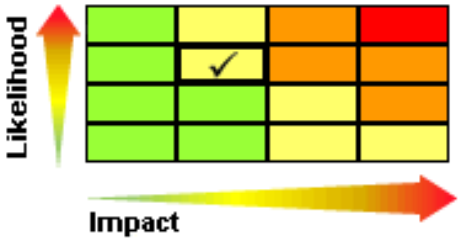
National Severe Weather Warning Service





Chief Forecasters Assessment
Road surface temperatures will fall widely below freezing on Friday evening and overnight into Saturday, leading to a risk of ice on untreated surfaces. This will be exacerbated by showers in places, more especially across Scotland where 2-5 cm fresh snowfall may accumulate above 150m with up to 10 cm settling above 300 m.

Further south, a mixture of rain, sleet and wet snow is likely, with most of any settling snow taking place above about 200 m. However, wet roads at low levels will contribute to the risk of ice formation.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **16:00 on Fri, 30th Jan 2015** until **11:00 on Sat, 31st Jan 2015**

Icy stretches are likely to form on untreated surfaces on Friday evening, overnight and into Saturday morning. In addition, further accumulation of snow are likely on high ground, especially across the northern half of the yellow area.

The public should be aware of the risk of difficult driving conditions.
